

Mathematics

Week 1 Term 4

STAGE 3

BODMAS

Set up of Week 1 Maths

- Hi Stage 3,
- We have tried to set your Maths work up a little differently. You will notice that each slide has a star.
- Just like at school, sometimes we need to complete work differently to other students to make sure we are working on a skill that will help you continue to learn and grow.
- Your teacher will be in contact with you if you are to work on the 1 star or 3 star activities.
- If you feel the 2 star activities are too hard, please attempt the 1 star activity. If you feel the 2 star activity is too easy please attempt the 3 star activity.

WEDNESDAY

- ❖ Daily NAPLAN Question
 - ❖ Division time challenge.
 - ❖ BODMAS explanation powerpoint.
 - ❖ 1 star activity.
 - ❖ 2 star activity.
 - ❖ 3 star activity.
- 
- 
- 

NAPLAN Question

Bill, Sue and Mark share a bag of apples.

Bill and Sue each get $\frac{1}{6}$ of the apples in the bag.

What fraction of the bag of apples is left for Mark?

$$\frac{4}{6}$$

$$\frac{3}{6}$$

$$\frac{2}{6}$$

$$\frac{1}{6}$$

Division Time Challenge

Number of Questions: 50

Testing: 2×, 3×, 4×, 5×, 6×, 7×, 8×, 9×, 10×, 11×, 12× (inverse)

$24 \div 2 = \underline{\quad}$

$20 \div 4 = \underline{\quad}$

$18 \div 2 = \underline{\quad}$

$5 \div 5 = \underline{\quad}$

$32 \div 4 = \underline{\quad}$

$25 \div 5 = \underline{\quad}$

$18 \div 3 = \underline{\quad}$

$60 \div 10 = \underline{\quad}$

$32 \div 8 = \underline{\quad}$

$3 \div 3 = \underline{\quad}$

$36 \div 6 = \underline{\quad}$

$80 \div 10 = \underline{\quad}$

$100 \div 10 = \underline{\quad}$

$10 \div 10 = \underline{\quad}$

$42 \div 7 = \underline{\quad}$

$40 \div 4 = \underline{\quad}$

$18 \div 9 = \underline{\quad}$

$88 \div 11 = \underline{\quad}$

$110 \div 11 = \underline{\quad}$

$121 \div 11 = \underline{\quad}$

$84 \div 12 = \underline{\quad}$

$4 \div 2 = \underline{\quad}$

$49 \div 7 = \underline{\quad}$

$11 \div 11 = \underline{\quad}$

$70 \div 7 = \underline{\quad}$

$36 \div 4 = \underline{\quad}$

$10 \div 2 = \underline{\quad}$

$63 \div 9 = \underline{\quad}$

$12 \div 12 = \underline{\quad}$

$55 \div 5 = \underline{\quad}$

$66 \div 6 = \underline{\quad}$

$14 \div 7 = \underline{\quad}$

$10 \div 5 = \underline{\quad}$

$80 \div 8 = \underline{\quad}$

Order of Operations

BODMAS - TWO STEPS

Order of Operations

What are they?

Order of Operations

What are they?

The rules that say which calculation comes first in an expression

Order of Operations

What are they?

The rules that say which calculation comes first in an expression

Why?

Order of Operations

What are they?

The rules that say which calculation comes first in an expression

Why?

Because it guarantees that people can all read and solve a problem in the same way

Order of Operations

What are they?

The rules that say which calculation comes first in an expression

Why?

Because it guarantees that people can all read and solve a problem in the same way

Interesting Fact

Order of Operations

What are they?

The rules that say which calculation comes first in an expression

Why?

Because it guarantees that people can all read and solve a problem in the same way

Interesting Fact

Mosquitoes can beat their wings between 450 and 600 times per second

BODMAS

Your Turn

Evaluate the expressions below

Ex 1 $7 \times (9 + 2)$ 77

Ex 2 $(27 - 6) \div 3$ 7

Ex 3 $12 + (14 - 9)$ 17

Ex 4 $(15 - 6) \times 4$ 36

Ex 5 $20 \div (7 - 2)$ 4

1- Star Activity

If a long sum (or expression) has no brackets, like $3 + 5 \times 5 =$ it has been agreed by mathematicians that the multiplying would be worked out before the addition, even if it does not appear first in the sum.

If a sum has a bracket as part of it, such as $4 \times (5 + 4) =$ then it has been agreed that the part inside the brackets will be calculated first.

There is an easy way to remember this: BODMAS

Backets

Of

Division

Multiplication

Addition

Subtraction

Any sum in brackets is calculated first.
Division and multiplication are calculated before addition and subtraction.

Try these to get the idea!

1. $6 + 4 \times 2 =$

2. $4 + 4 \div 2 =$

3. $8 + 6 - 3 =$

4. $5 + 5 \times 4 =$

5. $12 + 3 \times 2 =$

6. $2 \times 4 + 5 =$

Not as hard as I thought!
I can have a break now!

2-Star Activity

Remember BODMAS. Any calculations inside brackets must be completed before any other part of the sequence.

Without using a calculator work out the answers to the following sequences:

- | | |
|-------------------------------|-------------------------------------|
| 1. $100 - (20 \times 3) =$ | 9. $(5 \times 7) - (2 \times 5) =$ |
| 2. $(35 - 15) + (27 - 7) =$ | 10. $56 - (4 \times 7) =$ |
| 3. $15 + (6 \times 6) =$ | 11. $78 - (10 \times 7) =$ |
| 4. $(4 + 5) \times (3 + 6) =$ | 12. $(7 \times 7) + (4 \times 8) =$ |
| 5. $(5 + 5) \times (5 - 2) =$ | 13. $(45 - 23) + (5 \times 8) =$ |
| 6. $50 - (6 \times 6) =$ | 14. $38 - (5 \times 7) =$ |
| 7. $(4 + 8) \times (3 - 2) =$ | 15. $(100 - 45) + (7 \times 7) =$ |
| 8. $(9 - 3) + (6 \times 6) =$ | 16. $45 - (9 \times 4) =$ |

Not so tricky eh! I bet you got all these correct!

Just a couple of trickier problems. By putting in brackets in different places, how many different sums and answers can you find for these two sequences:

- $4 + 4 \times 5 - 3 =$
- $8 + 5 \times 1 + 3 - 6 =$

Remember BODMAS shows you the order in which operations should be carried out.

What is the value of ;

- | | |
|-------------------------------------|--|
| 1. $(4 \times 2) + (3 \times 3) =$ | 2. $(4 \times 4) + (5 \times 5) =$ |
| 3. $(6 \times 6) - (4 \times 4) =$ | 4. $(9 \times 9) - (8 \times 8) =$ |
| 5. $18 - (4 \times 2) =$ | 6. $4 \times (4 - 2) =$ |
| 7. $18 - (9 \times 4) + 32 =$ | 8. $(12 \times 12) - (11 \times 12) =$ |
| 9. $30 - (5 \times 4) =$ | 10. $67 - (9 \times 5) =$ |
| 11. $(8 + 6) \times 4 =$ | 12. $8 \times 7 - 3 =$ |
| 13. $(4 \times 9) - (4 \times 8) =$ | 14. $56 - (5 \times 9) =$ |
| 15. $72 - (8 \times 7) + 9 =$ | 16. $(9 \times 8) + (9 \times 8) =$ |

Wow! I bet you got most of these right as well. Getting easy aren't they! Try finding a sequence that will give the same answer if you put the brackets in two different places.

3- Star Activity

Remember BODMAS shows you the order in which operations should be carried out.

Write the following sums out without changing the order of the numbers. To make the sums correct put in the brackets if necessary to show which part has to be completed first.

$$8 + 4 \times 6 - 5 = 27$$

$$8 + 4 \times 6 - 5 = 12$$

$$8 + 4 \times 6 - 5 = 67$$

You can see the need for a rule on this otherwise everyone would be doing sums in different ways and getting different answers!

Put in the signs and/or brackets to make the following true:

1. $4 \quad 4 \quad 3 = 16$ 6. $4 \quad 6 \quad 4 = 20$

2. $7 \quad 6 \quad 11 = 12$ 7. $10 \quad 3 \quad 5 = 35$

3. $2 \quad 2 \quad 4 = 8$ 8. $2 \quad 4 \quad 6 = 1$

4. $2 \quad 2 \quad 4 = 16$ 9. $24 \quad 2 \quad 4 = 8$

5. $4 \quad 3 \quad 3 = 13$ 10. $5 \quad 4 \quad 4 = 21$

Ah ha! I bet you didn't find these quite as easy! You did? Great!

Do you remember what these signs mean? $<$ and $>$

$<$ means is less than

$>$ means is more than

The arrow always points to the smaller number!

Put the correct sign into the statements below. You will have to work out the sums first, remembering BODMAS

1. $6 + 4 \times 3$ $3 \times 4 + 6$

2. $8 \times 8 - 20$ $6 \times 6 + 20$

3. $2 \times 32 + 46$ $62 + 4 \times 9$

4. $8 + 8 \times 6$ $6 + 8 \times 8$

5. $120 - 6 \times 7$ $6 \times 7 + 40$

6. $140 + 4 \times 7$ $32 \times 5 + 5$

Investigate: Using only these numbers and signs make a statement or expression which will give you the biggest possible answer:

$8 + 7 - 6 \times 4$ and one set of brackets.
